## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments, see page 8, filed on November 28<sup>th</sup>, 2003, with respect to claims 2 and 4-24 have been fully considered and are persuasive. The previous office action has been withdrawn.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. There is insufficient antecedent basis for limitations "the canister".

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 2 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Murase et al. US Patent No. 4,982,274. Referring to claim 2, Murase discloses a heat pipe type cooling apparatus for semiconductor that comprises a first heat pipe 11 having an evaporator and a condenser, the first heat pipe being mounted with the evaporator inside the canister and the condenser outside the canister; a second heat pipe having an evaporator thermally coupled to the

Art Unit: 3743

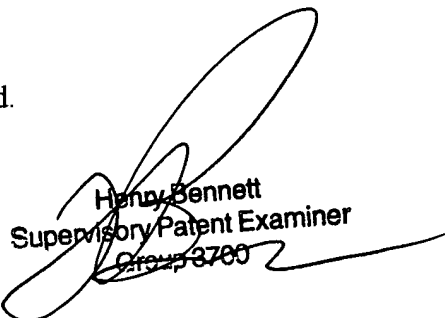

condenser of the first heat pipe, the second heat pipe having a condenser; and means for dissipating heat from the condenser of the second heat pipe (see figure 2A).

Referring to claim 4, Murase discloses a heat pipe cooling apparatus for semiconductor that comprises a first heat pipe having an evaporator and a condenser, the first heat pipe being mounted with the evaporator inside the canister and the condenser outside the canister; a second heat pipe having an evaporator thermally coupled to the condenser of the first heat pipe, the second heat pipe having a condenser; a third heat pipe having an evaporator thermally coupled to the condenser of the second heat pipe, the third heat pipe having a condenser; and means for dissipating heat from the condenser of the third heat pipe (see figure 2A).

***Allowable Subject Matter***

4. Claims 5 through 16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 17 through 24 are allowed.
